

Helical Gear Boxes BT/I with Two Shaft Ends

Casing: Cast iron casing with thick walls and ribbed construction, sealed against oil leaks and dust.

Gears: Special steel, extremely hard wearing and case hardened. Smooth-running helical gear wheels with ground or scraped tooth profiles.

Bearing: Generously dimensioned bearings as standard version (heavy-duty bearings for higher overhung or thrust loads available at extra cost).

Lubrication: The gear boxes are delivered ready for work, filled with the correct level of oil or grease, which offers sufficient lubrication for about 10,000 operation hours, or for an operation period of max. 2 years, at a temperature of -30 to +80°C.

Before start up, the plastic plug must be taken out of the venting screw, otherwise excess pressure will build up inside the gearbox.

Dimension Table for Helical Gearboxes BT/I With Two Shaft Ends

Foot Mounting Model B 3

The shaft ends $\varnothing d$ are machined according to ISO k6.
Feather keys according to DIN 6885.

Flange Mounting Model B 5

Selection of available flanges: Mountings according to DIN 42948.
Up to 300 mm diameter a_1 the recess $\varnothing b_1$ of the output flanges is manufactured according to ISO j6, over 300mm according to ISO h6.

Size 7 is as standard equipped with a stronger bearing system.

The stated values for radial load (F_R) assume that the impact of the load is in the centre of the shaft length (see drawing). If both radial and axial forces occur, the permissible radial force (F_R) indicated in the table is reduced by the value of the occurring axial force (F_A).

Gearbox Selection for Operating Factors Larger Than $f_B = 1$

In addition to the input power (P) and output speed (n_2) you also enter the respective **operating factor** (f_B) into the formula. When selecting the gearbox from the table, the table value (M_n) **must be no smaller than** the calculated figure (M_n).

$$M_{n_2} = \frac{P \times 9550}{n_2} \times f_B$$

M_{n_2} [Nm] = Output torque.

P [kW] = Input power.

n_2 [min⁻¹] = Output speed.

f_B = Operating factor.
